

Design module for air intake and diffusion with the Coandă effect

EFFETTO

Great precision for great capacities

Galletti introduces EFFETTO, the design module for air intake and diffusion designed to complement the reliability and comfort of ACQVARIA and ACQVARIA i hydronic cassette units (600x600 mm model).

EFFETTO breaks with standard hydronic cassette units, going far beyond the classic ABS grille with adjustable fins, and presents a design module that takes advantage of the Coandă effect.

Galletti's new Design Unit has created an Italian-made hydronic cassette unit with a minimalist, streamlined design that can be incorporated into the style of any space, even in terms of colour. EFFETTO is not just about aesthetics but also comfort, as it has been designed to optimise air diffusion thanks to the Coandă effect.

EFFETTO's Dibond metal panel is comprised of a sandwich of aluminium and polyethylene.

The fine metallic finish is combined with the insulating properties of polyethylene to prevent condensation. The steel intake grille creates a single surface with the panel, thus enhancing the overall subtlety of the product.

The filter is easily removable for maintenance operations. The air duct is made of black RAL 9005 polystyrene for a perfect colour match, and its geometry is designed to optimise the air flow in the room.

The brightness of the aluminium allows the grille to adapt to any situation, while keeping the milled edge of the panel, which outlines its shape, clearly visible, even in low light conditions. The module, detached from the ceiling, interacts with all the elements and light sources in the room.

EFFETTO is the perfect choice to give a smooth, streamlined appearance.

AVAILABLE VERSIONS

Three colour versions are available: natural brushed aluminium, white RAL 9010, and black RAL 9005 (March 2022). Black is also used for all the components of the internal and technological structure in order to create a shadow effect on the surrounding surfaces, making the panel appear to float in the air.

Grey - natural brushed aluminium

White - RAL 9010

Black - RAL 9005 (available as of March 2022)
